# Problem Statement

Industry: InsurTech

Event organizers face several risks while managing large events such as concerts, exhibitions, and corporate gatherings. These risks may include crowd injuries, equipment damage, or weather disruptions.

However traditional insurance quotation processes are often slow and lack transparency. Event organizers may not clearly understand how premiums are calculated.

There is a need for a digital platform that can:
• Collect event information easily
• Calculate insurance premiums instantly
• Adjust pricing based on risk and event size
• Provide a clear breakdown of the insurance cost

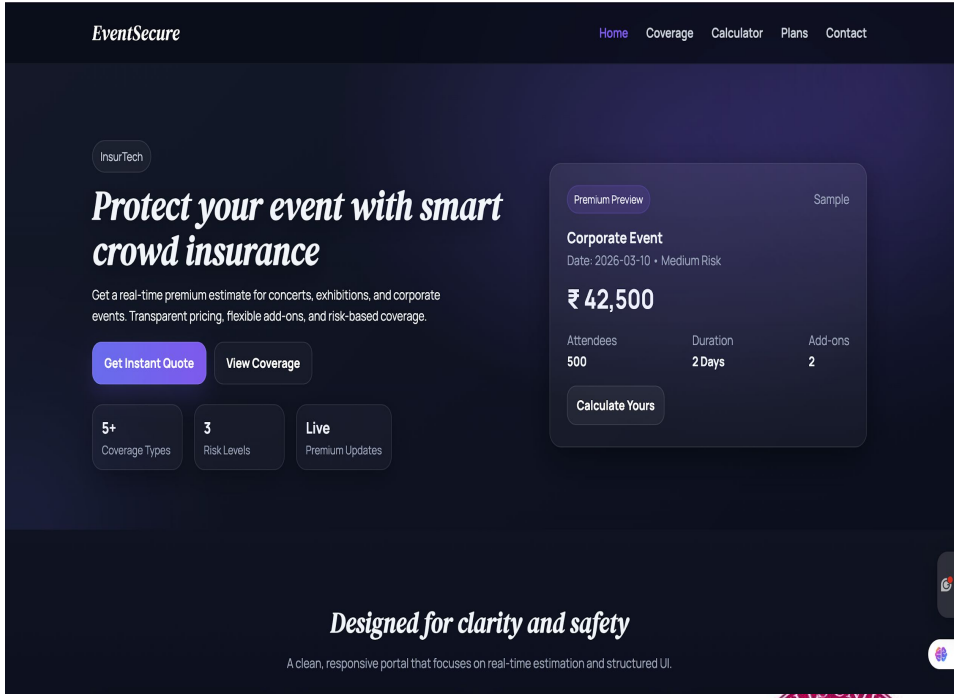
This project aims to solve this problem by developing a responsive web-based insurance portal that estimates event insurance premiums dynamically.

# Your solution

The solution is a multi-page insurance portal called EventSecure.

Main Features:
- Multi-page responsive website
(Home, Coverage, Calculator, Plans, Contact)
- Real-time premium calculator
- Risk category system (Low / Medium / High)
- Optional add-on coverages
- Transparent premium breakdown

Technologies Used:
- HTML5 - website structure
- CSS3 - styling and responsive design
- JavaScript - premium calculation and interaction



# Working (Mind map)

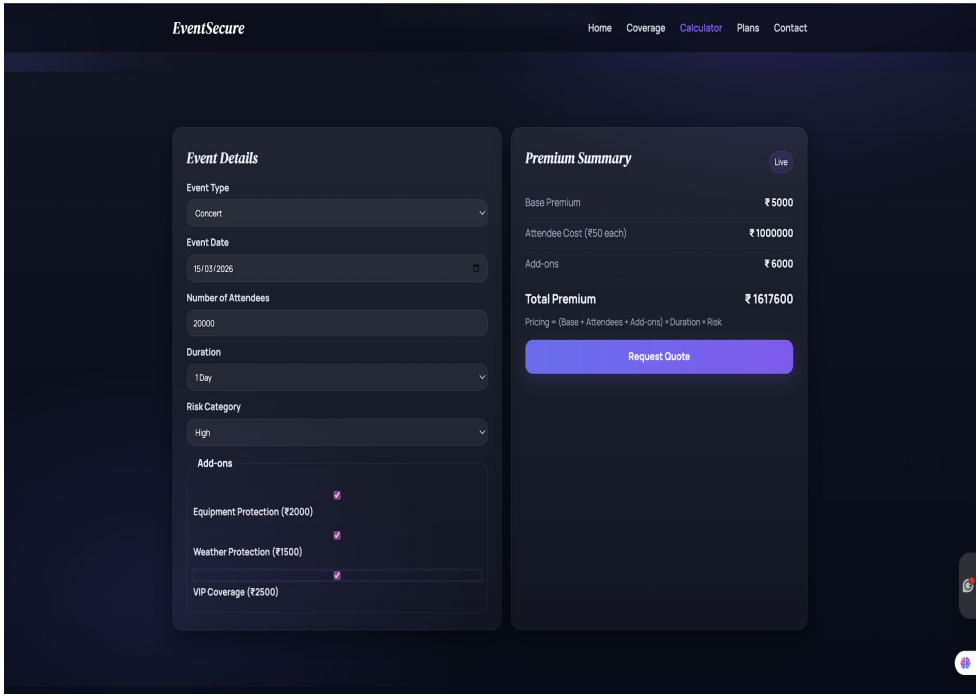
Workflow of the system:

User enters event details –

Event Type - Base Premium
Number of Attendees - Attendee Cost
Add-ons Selected -  Additional Charges
Duration & Risk Category -  Multiplier Applied

Final Formula:
Total Premium = (Base Premium + Attendee Cost + Add-ons) × Duration × Risk

JavaScript updates the premium instantly and displays it in the Premium Summary section.



# Index

## Conclusion

- EventSecure provides an interactive platform to estimate event insurance premiums.
- The system calculates premiums using event details, risk category, duration, and add-ons.
- It improves transparency by showing a clear pricing breakdown.
- Demonstrates the practical use of HTML, CSS, and JavaScript for building responsive web applications.
